SOFTWARE REQUIREMENTS SPECIFICATION

FoodSaver

Surplus Food Donation and Redistribution System

Software Engineering – Lab 1 | IEEE 830 Format

Student: Saanvi S
Register No: NU24UCA065
Programme: Third Year BCA
Academic Year: 2025–26

1. Introduction

1.1 Purpose

This SRS defines the requirements of FoodSaver, a platform that reduces food waste by connecting surplus-food donors such as restaurants, hotels, canteens and event organizers with verified NGOs or community organizations.

1.2 Scope

Donors register and post food type, quantity, preparation time, safe-consumption period and pickup location. Verified recipients browse donations and submit requests. Donors accept or reject requests. The system provides status updates, notifications and donation history. FoodSaver coordinates information only; it does not cook or physically transport food.

1.3 Definitions

Term	Meaning
Donor	Registered person/organization offering surplus food.
Recipient	Verified NGO/community organization requesting food.
Administrator	Manages users, verification and records.
Donation listing	Record describing available surplus food.

2. Overall Description

2.1 Product Perspective

FoodSaver is a web/mobile-oriented application with a user interface, application logic and database. It may use email/SMS/push services for notifications.

2.2 User Classes

User	Responsibilities
Donor	Create/manage listings, respond to requests and coordinate pickup.
Recipient	Submit verification details, search donations and request food.
Administrator	Verify recipients and manage users and donation records.

2.3 Assumptions

Users have internet access and valid contact details. Recipients are verified before requesting food. Donors provide accurate food information. Recipients arrange collection. The application depends on a database and may use a notification service.

3. Functional Requirements

ID	Requirement	Priority
FR-01	Allow users to register as donors or recipients.	High
FR-02	Allow secure login and logout.	High
FR-03	Allow recipients to submit verification details.	High
FR-04	Allow administrators to approve/reject recipient verification.	High
FR-05	Allow donors to create listings with food type, quantity, preparation time, safe period and pickup location.	High
FR-06	Allow donors to edit or cancel active listings.	Medium
FR-07	Allow verified recipients to search and view donations.	High

ID	Requirement	Priority
FR-08	Allow verified recipients to request donations.	High
FR-09	Allow donors to accept or reject requests.	High
FR-10	Allow both parties to view request status.	High
FR-11	Send notifications for requests and status changes.	Medium
FR-12	Maintain completed/cancelled donation history.	Medium
FR-13	Allow administrators to manage users and donation records.	High
FR-14	Allow users to update profile/contact information.	Medium

4. Non-Functional Requirements

Performance: Common pages/searches should respond within about two seconds under normal load.
Security: Protect passwords and user data; enforce role-based access.
Reliability: Store records consistently and maintain backups.
Usability: Use clear labels, validation and simple navigation.
Maintainability: Use modular components.
Compatibility: Support modern browsers and mobile screens.

5. External Interfaces and Data

The interface includes registration/login, donor dashboard, donation form, recipient search, request-status page and administrator dashboard. Data includes users, verification records, donations, requests, status history and notifications. No special hardware is required.

6. Constraints and Conclusion

Internet access is required. Only verified recipients can request donations. Donors are responsible for accurate food details and safe handling; physical transportation is outside the system scope. This SRS provides the basis for designing, implementing and testing FoodSaver.
